

API Documentation – Bulk Upload Endpoint

This document describes how to use the bulk upload API endpoint. The endpoint allows a POS system or external system to upload multiple invoice records in a single request.

Endpoint

POST /api/v1/uploads/bulk

Required Header

Header Name	Description	Example
X-API-KEY	API key header (only presence required)	X-API-KEY: your-api-key

Request Body (JSON)

```
{
  "uploads": [
    {
      "store_manager_name": "Raj Sharma",
      "store_manager_id": 5,
      "invoice_no": "INV-1001",
      "customer_name": "Amit",
      "customer_mobile": "9876543210",
      "product_name": "Merlot",
      "product_price": 1200
    },
    {
      "store_manager_name": "Raj Sharma",
      "store_manager_id": 5,
      "invoice_no": "INV-1002",
      "customer_name": "Karan",
      "customer_mobile": "9876543211",
      "product_name": "Cabernet Sauvignon",
      "product_price": 1500
    }
  ]
}
```

Example Response

```
{
  "status": true,
  "message": "Bulk upload successful",
  "records_inserted": 2
}
```

}

Steps to Call the API

- 1 Send a POST request to **/api/v1/uploads/bulk**.
- 2 Include the header **X-API-KEY** in the request.
- 3 Set the request body to JSON and include the **uploads** array.
- 4 Each object inside uploads represents one invoice record.
- 5 The API will insert all records and return a success response.
