

Wine POS Integration API

Bulk Upload API Documentation

Purpose

This endpoint allows a Store Manager POS system to upload multiple invoice records in a single request.

Property	Value
Endpoint	POST /api/v1/uploads/bulk
Method	POST
Content Type	application/json
Authentication	X-API-KEY Header

Required Header

X-API-KEY: Use the API key assigned to your Store Manager account. If you do not have an API key, please contact your administrator.

Sample Request Body

```
{
  "uploads": [
    {

    }
]
}

```

Successful Response

```

{
  "status": true,
  "message": "Bulk upload successful",
  "records_inserted": 2
}

```

Integration Steps

1. Obtain your API key from your administrator. The key is available in your Store Manager profile.
2. Include the API key in the X-API-KEY request header.
3. Send a POST request to **/api/v1/uploads/bulk**.
4. Set the request Content-Type to **application/json**.
5. Include one or more objects inside the uploads array.
6. Ensure **store_manager_id** matches your Store Manager account.
7. On success, the API returns the number of records inserted.
